Abstracts

Network as a service (NaaS) describes services for network transport connectivity. NaaS involves the optimization of resource allocations by considering network and computing resources as a unified whole.

Networking as a Service (NaaS) is the sale of network services from third parties to customers that don't want to build their own networking infrastructure.

NaaS packages networking resources, services, and applications as a product that can be purchased for a number of users, usually for a contracted period of time. It can include services such as Wide Area Networking (WAN) connectivity, data-center connectivity, bandwidth on demand (BoD), security services, and other applications.

This report elaborates the market size, market characteristics, and market growth of the Network As A Service (NaaS) industry, and breaks down according to the type, application, and consumption area of Network As A Service (NaaS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Network As A Service (NaaS) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
