Abstracts

Network functions virtualization (NFV) (also known as virtual network function (VNF)) offers a new way to design, deploy and manage networking services. NFV decouples the network functions, such as network address translation (NAT), firewalling, intrusion detection, domain name service (DNS), and caching, to name a few, from proprietary hardware appliances so they can run in software.

This report elaborates the market size, market characteristics, and market growth of the Network Function Virtualization industry, and breaks down according to the type, application, and consumption area of Network Function Virtualization. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Network Function Virtualization in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
