## Abstracts

Neurodegenerative disease is an umbrella term for a range of conditions which primarily affect the neurons in the human brain.

Neurons are the building blocks of the nervous system which includes the brain and spinal cord. Neurons normally don't reproduce or replace themselves, so when they become damaged or die they cannot be replaced by the body. Examples of neurodegenerative diseases include Parkinson's, Alzheimer's, and Huntington's disease.

Neurodegenerative diseases are incurable and debilitating conditions that result in progressive degeneration and / or death of nerve cells. This causes problems with movement (called ataxias), or mental functioning (called dementias).

Dementias are responsible for the greatest burden of neurodegenerative diseases, with Alzheimer's representing approximately 60-70% of dementia cases.

This report elaborates the market size, market characteristics, and market growth of the Neurodegenerative Diseases industry, and breaks down according to the type, application, and consumption area of Neurodegenerative Diseases. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Neurodegenerative Diseases in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
