Abstracts

Neurostimulation is the use of invasive or non-invasive means to purposefully regulate the activity of the nervous system. Neurostimulation usually refers to an electromagnetic method of neuromodulation. Neurostimulation techniques can improve the quality of life of people with severe delirium or severe loss of various sensory organs, as well as permanently reduce severe chronic pain that would otherwise require sustained high-dose opioid therapy.

This report elaborates the market size, market characteristics, and market growth of the Neurostimulation industry, and breaks down according to the type, application, and consumption area of Neurostimulation. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Neurostimulation in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
