Abstracts

Nuclear Battery (atomic) is a new generation of power-generating devices, based on the concept of producing electrical power from radio isotopic fuel sources. Technological advancements in material technologies in electricity production, nuclear isotope held devices (batteries) are feasible to generate electrical power in an efficient manner.

These batteries are able to produce power in multi watt levels and with negligible heat emission in its daily operation. These nuclear batteries can be scaled to reach levels of power up to thousands of watts, if required. This new technology has been made viable to be used with/compatible with almost all kinds of electronic devices.

This report elaborates the market size, market characteristics, and market growth of the Nuclear Battery industry, and breaks down according to the type, application, and consumption area of Nuclear Battery. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
