## Abstracts

Nuclear Cables have many types and quantities. If divided by purpose, there are five categories: power cables, control cables, measurement cables, communication cables, and fire-resistant cables (silicon insulated cables). Compared with general industrial cable, the biggest difference is that the performance requirements of nuclear power plant cable material need to be low smoke and halogen-free flame retardant. Insulating and sheathing materials for nuclear grade cables must use low smoke, non-toxic, non-corrosive, halogen-free flame retardant cable materials, such as thermoplastic flame retardant halogen-free and cross-linking flame retardant halogen-free materials. This report elaborates the market size, market characteristics, and market growth of the Nuclear Cable industry, and breaks down according to the type, application, and consumption area of Nuclear Cable. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Nuclear Cable in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
