## Abstracts

The nutmeg is the seed of *Myristica fragrans*, an evergreen tree indigenous to the Banda Islands in the Moluccas (or Spice Islands) of Indonesia and was one of the principal targets in the great race to find a Western route to the Spice Islands – and thus led to the European discovery of the West Indies and the American continent. The tree is unique for producing two spices, because the lace-like filament that encloses the nutmeg gives us mace, a lighter, some would say more elegant, spice that is far less used.

This report elaborates the market size, market characteristics, and market growth of the Nutmeg Derivative industry, and breaks down according to the type, application, and consumption area of Nutmeg Derivative. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Nutmeg Derivative in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
