## Abstracts

Octocrylene is an ester of diphenylcyanoacrylate and 2-ethylhexanol formed by condensation process. The organic compound is a colorless, oily and viscous liquid. Octocrylene is primarily used in the sunscreens owing to its skin moisturizing properties. Octocrylene can neutralize UV radiation emitted by sun and minimizes skin damage caused by prolonged sun exposure. The compound is approved by various regulatory organizations across the globe; however its concentration is limited to 10-12% in any formulation. It is not used to protect face and arms. It is widely used in the products such as BB cream, CC cream, hair spray, conditioner and tannin oil.

This report elaborates the market size, market characteristics, and market growth of the Octocrylene industry, and breaks down according to the type, application, and consumption area of Octocrylene. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Octocrylene in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
