Abstracts

Offshore wind is the use of wind farms constructed in bodies of water, usually in the ocean on the continental shelf, to harvest wind energy to generate electricity. Higher wind speeds are available offshore compared to on land, so offshore wind power's electricity generation is higher per amount of capacity installed,[1] and NIMBY opposition to construction is usually much weaker.

This report elaborates the market size, market characteristics, and market growth of the Offshore Wind Events industry, and breaks down according to the type, application, and consumption area of Offshore Wind Events. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Offshore Wind Events in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
