Abstracts

Offshore wind power, also known as offshore wind energy, is built on offshore wind power plants, usually located on the continental shelf, using wind energy for power generation. In general, offshore wind resources are more abundant on land and the wind direction is relatively stable, making offshore wind power generation more power than onshore wind power generation in the same time, and the facilities are far from the people's place of residence. The rebound of avoiding facilities is also small

This report elaborates the market size, market characteristics, and market growth of the Offshore Wind Power industry, and breaks down according to the type, application, and consumption area of Offshore Wind Power. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Offshore Wind Power in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
