Abstracts

Pressure pumping is a propagation of fractures through layers of rock using pressurized fracturing fluid and pumping the cement into the well bore to complete it. This technique is primarily used to extract resources from low permeability reservoirs such as shale gas, tight gas, and unconventional liquids, which are difficult to recover through regular drilling procedures.

This report elaborates the market size, market characteristics, and market growth of the Oil Market Pressure Pump industry, and breaks down according to the type, application, and consumption area of Oil Market Pressure Pump. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
