## Abstracts

Oil well cement is used in drilling oil and gas wells. Oil well cement is used for oil well grouting, sometimes referred to as oil well cementing. It consists of Portland or mixed cement plus additives. Oil well cement must be slowly set and able to withstand the high temperatures and pressures of these deep wells. This process plays an important role in drilling operations. The cement is mixed with water and additives to form a slurry which is then pumped into a well around the casing, which is a large tube inserted into a new borehole.

This report elaborates the market size, market characteristics, and market growth of the Oil Well Cement Additive industry, and breaks down according to the type, application, and consumption area of Oil Well Cement Additive. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Oil Well Cement Additive in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
