Abstracts

Oligonucleotide synthesis is the chemical synthesis of relatively short nucleic acid fragments with defined chemical structures (sequences). This technique is very useful in current laboratory practice because it provides a fast and inexpensive acquisition of custom oligonucleotides for the desired sequence.

This report elaborates the market size, market characteristics, and market growth of the Oligonucleotide Synthesis industry, and breaks down according to the type, application, and consumption area of Oligonucleotide Synthesis. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Oligonucleotide Synthesis in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
