Abstracts

Operational predictive maintenance software retrieve multiple data sources in real time to predict quality issues or asset failure. Adoption of these software solutions facilitate organizations to prevent downtime and reduce maintenance costs. Operational predictive software solutions detect failure patterns and minor anomalies to determine the assets and operational processes that are at the greatest risk of failure. Deployment of operation predictive maintenance software boosts equipment uptime and enhance supply chain processes and quality. One of the major factors for the increasing usage of these software solutions is their ability to accurately predict asset failure, enabling enterprises to take the asset out of production ensuing efficient supply chain.

This report elaborates the market size, market characteristics, and market growth of the Operational Predictive Maintenance industry, and breaks down according to the type, application, and consumption area of Operational Predictive Maintenance. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Operational Predictive Maintenance in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
