## Abstracts

Opioids are a class of medications that are regularly endorsed for their pain relieving, or pain-killing, properties it is chronic and non-cancer pain. A typical symptom connected with the utilization of these medications are that they decrease the gastrointestinal tract's motility, making solid discharges and making patients strain. In addition, prolonged utilization of opioids can prompt the harm of sensory system that causes body cells to quit creating endogenous opioids, for example, endorphins. There is high risk of constipation in adults since they have poor diet, poor fluid intake and immobility. The typical symptoms for opioid-induced constipation are feeling lethargic, hard and dry stools, distention and bulged abdomen, painful defecation and loss of appetite. The opioid-induced constipation (OIC) treatment market is an exceptionally alluring and promising market because of the expanding base of opioid-induced constipation OIC sufferers.

This report elaborates the market size, market characteristics, and market growth of the Opioid-Induced Constipation (OIC) Treatment industry, and breaks down according to the type, application, and consumption area of Opioid-Induced Constipation (OIC) Treatment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
