Abstracts

The optical rotary encoder output is binary; it is either light or dark. An optical rotary encoder has a moving disk, with concentric tracks etched into the disk. Periodically, these tracks have an opening, called a window. The windows of every track are offset, so that each revolution of the optical rotary encoder has a different light/dark pattern. This report elaborates the market size, market characteristics, and market growth of the Optical Rotary Encoders industry, and breaks down according to the type, application, and consumption area of Optical Rotary Encoders. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Optical Rotary Encoders in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
