Abstracts

Packaged Refrigeration systems provide substantial cost, space, and time advantages. Packaged refrigeration systems of all individual systems in-factory as opposed to field fitted systems, which are completed on-site, require only electrical and piping services. As the fabrication of these systems can be completed before hand, they can be instrumental in reducing the overall delivery timeline. Packaged refrigeration systems are manufactured in a controlled environment, which helps to ensure higher standards of quality control. The ease of customizing these systems in relation to the required application is a major factor that will drive the demand. This reduces designing and adaption cost of single elements, as well as installation time and cost on-site. Also, these systems can be manufactured in almost all sizes, requiring minimal on-site connections.

This report elaborates the market size, market characteristics, and market growth of the Packaged Refrigeration industry, and breaks down according to the type, application, and consumption area of Packaged Refrigeration. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Packaged Refrigeration in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
