Abstracts

A decentralized wastewater treatment system, commonly referred to as a “packaged plant”, utilizes the biological extended aeration principle of operation, which is a variation of the activated sludge treatment process. This system functions by creating an environment with sufficient oxygen levels and agitation to allow for bio-oxidation of the wastes to suitable levels for discharge.

This report elaborates the market size, market characteristics, and market growth of the Packaged Wastewater Treatment industry, and breaks down according to the type, application, and consumption area of Packaged Wastewater Treatment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
