## Abstracts

Packer Bottles is a narrow-necked container as compared with a jar.[1] Bottles come in various shapes (round, oval, square, etc.) and sizes and are often made of glass, clay, plastic, aluminium or other impervious materials. They are used to transport and store liquids such as water, milk, soft drinks, beer, wine, cooking oil, medicine, shampoo, ink, and chemicals. A device applied in the bottling line to seal the mouth of a bottle is termed an external bottle cap, closure, or internal stopper. A bottle can also be sealed by a conductive 'innerseal' by using induction sealing.

This report elaborates the market size, market characteristics, and market growth of the Packer Bottles industry, and breaks down according to the type, application, and consumption area of Packer Bottles. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
