Abstracts

Pad printing (also called tampography) is a printing process that can transfer a 2-D image onto a 3-D object. This is accomplished using an indirect offset (gravure) printing process that involves an image being transferred from the clich? via a silicone pad onto a substrate. Pad printing is used for printing on otherwise difficult to print on products in many industries including medical, automotive, promotional, apparel, and electronic objects, as well as appliances, sports equipment and toys. It can also be used to deposit functional materials such as conductive inks, adhesives, dyes and lubricants.
This report elaborates the market size, market characteristics, and market growth of the Pad Printing Machines industry, and breaks down according to the type, application, and consumption area of Pad Printing Machines. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
