Abstracts

An automotive sunroof is a movable (typically glass) panel that is operable to uncover an opening in an automobile roof, which allows light and/or fresh air to enter the passenger compartment. Sunroofs are either manually operated or motor driven and are available in many shapes, sizes, and styles. While the term sunroof is now used generically to describe any glass panel in the roof, the term 'moonroof' was historically used to describe stationary glass panes rigidly mounted in the roof panel over the passenger compartment.

This report elaborates the market size, market characteristics, and market growth of the Panoramic Sunroof industry, and breaks down according to the type, application, and consumption area of Panoramic Sunroof. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
