Abstracts

Passenger tyres are for vehicles that are designed for personal use – like hatchbacks, sedans, coupes, and crossovers. Many SUVs, minivans, and smaller pickup trucks (under ? ton) also use passenger-rated tires.
The most significant difference between 4x4 tyres and standard is their purpose and versatility. Standard car tyres were designed to suit the tarmac roads that we see every day by maintaining traction. 4x4 tyres differentiate from normal tyres by priming their design for off-road conditions such as snow, grass, dirt and mud.
This report elaborates the market size, market characteristics, and market growth of the Passenger and 4x4 Tyres industry, and breaks down according to the type, application, and consumption area of Passenger and 4x4 Tyres. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Passenger and 4x4 Tyres in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
