Abstracts

Patients - Derived xenografts (PDX) are models of cancer in which tumors from patients with the above tissues or cells are injected into one or immunodeficient humanized mice. The PDX model mimics human tumor biology, allowing natural cancer progression and providing the most transformative research models to assess efficacy. This report elaborates the market size, market characteristics, and market growth of the Patient Derived Xenograft or PDX Models industry, and breaks down according to the type, application, and consumption area of Patient Derived Xenograft or PDX Models. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Patient Derived Xenograft or PDX Models in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
