Abstracts

Patient registry software is a database used to collect data related to diagnosis or condition of patient, for noting the number of new medical devices being used, or going through a new procedure.

Factors that drive the growth of the patient registry software market include increase in usage of electronic health records (EHRs), rise in prevalence of chronic disorders, growth in usage of the stored data for post-marketing surveillance, and surge in government initiatives to build patient registries. However, lack of maintenance of important private data and dearth of skilled resources restrain the market growth. Rise in number of accountable care organizations and emergence of cloud-based patient registry solutions are expected to provide growth opportunities for the market.

This report elaborates the market size, market characteristics, and market growth of the Patient Registry Software industry, and breaks down according to the type, application, and consumption area of Patient Registry Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Patient Registry Software in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
