Abstracts

PC Compounding consists of preparing plastic formulations by mixing or/and blending polymers and additives in a molten state, these blends are automatically dosed with fixed setpoints usually through feeders/hoppers. It is mostly a blend of copolymers such as ABS, SAN, SMA etc. with additives such as anti-oxidants, UV-stabilizers and other value adding agents and sometimes a strengthening component is added such as glass fibre.

This report elaborates the market size, market characteristics, and market growth of the PC Compounding industry, and breaks down according to the type, application, and consumption area of PC Compounding. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
