Abstracts

The artificial compression stress applied to neutralize tensile stress deployed by exterior force is known as prestress. The structures constructed with prestress is called PC. The wire or strand used on PC structure is known as PC wire or strand. When force is applied to the concrete, prestressing is introduced to counter the stresses resulting from the applied load. PC wires and strands are used as a medium to attain a force that can neutralize external forces such as stress or compression. Manufacturing and designing of high quality PC wires and strands have been a priority for top vendors in the market. They form an integral part of bridges and commercial and residential building constructions.

This report elaborates the market size, market characteristics, and market growth of the PC Wire & Strand industry, and breaks down according to the type, application, and consumption area of PC Wire & Strand. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
