Abstracts

Polycrystalline cubic boron nitride (PCBN) composites are produced by sintering micron cBN (cubic boron nitride) powders with various ceramic binders yielding hard and thermally stable tool materials. Most PCBN materials have a cemented carbide substrate. CBN is the second hardest material known, after diamond, but has high thermal and chemical resistance. PCBN composites provide extreme resistance to deformation and wear at high temperatures.

This report elaborates the market size, market characteristics, and market growth of the PCBN Material for Cutting Tools industry, and breaks down according to the type, application, and consumption area of PCBN Material for Cutting Tools. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
