## Abstracts

Polycrystalline diamond (PCD) is a diamond grit that is fused together under high pressure and high temperature conditions in the presence of a catalytic metal.

Polycrystalline cubic boron nitride (PCBN) composites are made of micron-sized CBN (cubic boron nitride) powder sintered together with various ceramic materials, making it an extremely hard and thermally stable tool material. Most PCBN materials are welded together with the carbide substrate. Cubic boron nitride is second only to synthetic diamond and is the second hardest material in the world, but it has extremely high thermal stability and chemical inertness.

This report elaborates the market size, market characteristics, and market growth of the PCD and PCBN Material for Cutting Tools industry, and breaks down according to the type, application, and consumption area of PCD and PCBN Material for Cutting Tools. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
