Abstracts

Polyether ether ketone (PEEK) is a semi-crystalline thermoplastic, which is inert and a thermally stable polymer. It has applications in nuclear, aerospace, temperature resistance interface, medical implants, etc. It has specific properties such as high temperature resistance, hydrolysis resistance, self-lubrication, easy processing, and high mechanical strength. PEEK produces small amount of smoke or toxic gas emissions when exposed to flame. It melts at a relatively high temperature compared to other thermoplastics and the range of its melting temperature can be processed using injection molding, extrusion methods, spray forming, or pressing methods.

This report elaborates the market size, market characteristics, and market growth of the PEEK (polyether-ether-ketone) industry, and breaks down according to the type, application, and consumption area of PEEK (polyether-ether-ketone). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for PEEK (polyether-ether-ketone) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
