Abstracts

A Penetration Test, colloquially known as a pen test, is an authorized simulated attack on a computer system, performed to evaluate the security of the system. The test is performed to identify both weaknesses (also referred to as vulnerabilities), including the potential for unauthorized parties to gain access to the system's features and data, as well as strengths, enabling a full risk assessment to be completed.

This report elaborates the market size, market characteristics, and market growth of the Penetration Testing industry, and breaks down according to the type, application, and consumption area of Penetration Testing. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Penetration Testing in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
