Abstracts

A microchip is a computer chip enclosed in a small glass cylinder (about the size of a grain of rice) that is injected under pet's skin as a means of identification. Each microchip is connected to an online registry of owner contact information. In the event that pet is lost and taken to a shelter or veterinary hospital, he will be scanned for a microchip. If the contact information on file is up to date, the pet's owner can be quickly notified and reunited with their pet.

This report elaborates the market size, market characteristics, and market growth of the Pet Microchips industry, and breaks down according to the type, application, and consumption area of Pet Microchips. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
