Abstracts

Petroleum and fuel dyes is general name for a family of aromatic substance, either organic or synthetic, which are used to add colour characteristics to gasoline and other petroleum products. These complex unsaturated substances have inherent characteristics like solubility and intense colour, and exhibits good affinity towards substrate on which it is being applied.

Petroleum and Fuel Markers, on the other hand, are colourless substances, which when added to fuel, are detected by adding a specific reagent to produce a characteristic colour, and can also be detected by placing the sample in a spectrophotometer to produce an equivalent result.

This report elaborates the market size, market characteristics, and market growth of the Petroleum and Fuel Dyes and Markers industry, and breaks down according to the type, application, and consumption area of Petroleum and Fuel Dyes and Markers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Petroleum and Fuel Dyes and Markers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
