Abstracts

Solar photovoltaics (PV) is the conversion of solar energy - light and heat from the sun - into electrical energy, which is consequently supplied either to the electric grid or to the consumer directly. This conversation is carried out by photosensitive semiconducting materials, assembled in the form of modules, usually referred to as solar PV modules or just solar modules.

This report elaborates the market size, market characteristics, and market growth of the Photovoltaic Modules industry, and breaks down according to the type, application, and consumption area of Photovoltaic Modules. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Photovoltaic Modules in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
