Abstracts

Piezoelectric materials constitute various types of ceramics, polymers, crystals, and composites that can generate a voltage when subjected to external pressure or, conversely, expand when a voltage is applied. The response of the piezoelectric material to the mechanical force/pressure that causes the charge/voltage to be generated is referred to as the direct piezoelectric effect. In contrast, the application of charge/field that causes mechanical stress or strain is referred to as the opposite piezoelectric effect.

This report elaborates the market size, market characteristics, and market growth of the Piezoelectric Materials industry, and breaks down according to the type, application, and consumption area of Piezoelectric Materials. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Piezoelectric Materials in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
