Abstracts

Pipette tips, sometimes spelled pipet tips, are used with pipettes and pipettors to speed processing and reduce cross-contamination. They are available in a variety of materials and styles. Universal pipette tips are used with most standard-diameter pipettes. They are usually made of polypropylene and disposable.

A pipette (sometimes spelled pipet) is a laboratory tool commonly used in chemistry, biology and medicine to transport a measured volume of liquid, often as a media dispenser. Pipettes come in several designs for various purposes with differing levels of accuracy and precision, from single piece glass pipettes to more complex adjustable or electronic pipettes. Many pipette types work by creating a partial vacuum above the liquid-holding chamber and selectively releasing this vacuum to draw up and dispense liquid. Measurement accuracy varies greatly depending on the style.

This report elaborates the market size, market characteristics, and market growth of the Pipette Tips industry, and breaks down according to the type, application, and consumption area of Pipette Tips. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Pipette Tips in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
