Abstracts

Piston Aircraft have one or more piston-powered engines connected to the propeller(s), which provide thrust to move the aircraft on the ground and through the air. Piston-powered aircraft most commonly use 100 octane low-leaded fuel and fly at altitudes below 15,000 feet. The inside of a typical piston aircraft seats 1-6 passengers is configured similar to the interior of a small car. Piston aircraft used for business typically fly relatively short missions of 300-400 miles, using very small general aviation airports that are often without air traffic control towers.

This report elaborates the market size, market characteristics, and market growth of the Piston Aircraft industry, and breaks down according to the type, application, and consumption area of Piston Aircraft. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Piston Aircraft in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
