Abstracts

Bioplastic is a plastic derived from a renewable biomass source, such as from vegetable oil, corn starch, pea starch or microbiota. Common plastics, such as fossil fuel plastics, are refined from petroleum, which rely more on fossil fuels and produce more greenhouse gases. Some, but not all, bioplastics are biodegradable plastics.

Biodegradable bioplastics can decompose in an oxygen-free or aerobic environment, depending on how they are made. Bioplastics can be composed of a wide variety of materials including: starch, cellulose or other biopolymers.

This report elaborates the market size, market characteristics, and market growth of the PLA bioplastic packaging industry, and breaks down according to the type, application, and consumption area of PLA bioplastic packaging. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for PLA bioplastic packaging in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
