Abstracts

A planetary gearbox refers to a gear system in which one or more 'planet' gears rotate around a central 'sun' gear. Typically, a planet carrier is driven by the input torque which rotates the planets around a fixed outer ring (sometimes referred to as the annulus).

This in turn drives the sun gear which then provides the output torque.

This report elaborates the market size, market characteristics, and market growth of the Planetary Gearboxes industry, and breaks down according to the type, application, and consumption area of Planetary Gearboxes. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Planetary Gearboxes in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
