## Abstracts

The plasma arc is ionized by ionization to generate a high-temperature ion gas stream, which is ejected from the pores of the nozzle and compressed to form a slender arc column. The temperature is reachable, higher than the conventional free arc, such as: argon arc welding only up to 5000- 8000K. Because the plasma arc has the characteristics of slender arch and high energy density, it has a wide range of applications in the field of welding.

This report elaborates the market size, market characteristics, and market growth of the Plasma Welding Machines industry, and breaks down according to the type, application, and consumption area of Plasma Welding Machines. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Plasma Welding Machines in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
