Abstracts

Injection molding is the process of producing parts made of thermoplastic or thermoset plastic. Injection molding is to heat and melt the plastic in the barrel of the injection molding machine when it is in a flowing state. Under the pressure of the plunger or screw, the molten plastic is compressed and moved forward, and then injected into the lower temperature closed mold through the nozzle at the front end of the barrel at a rapid speed. After a certain period of cooling and setting, the mold is opened. . This molding method is an intermittent operation process.

This report elaborates the market size, market characteristics, and market growth of the Plastic Injection Molding industry, and breaks down according to the type, application, and consumption area of Plastic Injection Molding.
