Abstracts

Plastic recycling is the process of recycling waste or waste plastic and reprocessing the material into a useful product. Since most plastics are not biodegradable, recycling is part of a global effort to reduce plastics in waste, especially about 8 million tons of waste plastics entering the Earth's oceans each year. Plastic polymer recovery is often more challenging than low-value glass compared to lucrative metal recycling because of its low density and low value.

This report elaborates the market size, market characteristics, and market growth of the Plastic Recycling industry, and breaks down according to the type, application, and consumption area of Plastic Recycling. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Plastic Recycling in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
