Abstracts

A three-fingered glove provides for uninhibited contact of the skin of the ring and little fingers with a billiard or like table while providing seam-free contact of the index and middle fingers and thumb with the billiard or like cue for controlled slidable support of the cue. An elastic friction pad panel at the ulnar side of the hand improves support of the cue and player by preventing slipping as well as maintaining an adequately firm yet yieldable attachment of the glove to the wearer's hand.
