Abstracts

Portable engine driven pumps harness their power from a portable running engine, which often uses diesel or petrol as a fuel. There is a big variety of pumps which are individually adapted to operate with specific fluids, powers and pressures. Portable engine driven pumps are used when there is no source of electricity available to power the pump's motor, or in cases where the mobility of the pump is a concern.

This report elaborates the market size, market characteristics, and market growth of the Portable Engine Driven Pumps industry, and breaks down according to the type, application, and consumption area of Portable Engine Driven Pumps. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Portable Engine Driven Pumps in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
