Abstracts

In simplest terms, plasma cutting is a process that uses a high velocity jet of ionized gas that is delivered from a constricting orifice. The high velocity ionized gas, that is, the plasma, conducts electricity from the torch of the plasma cutter to the work piece. The plasma heats the workpiece, melting the material. The high velocity stream of ionized gas mechanically blows the molten metal away, severing the material.

This report elaborates the market size, market characteristics, and market growth of the Portable Plasma Cutting Machine industry, and breaks down according to the type, application, and consumption area of Portable Plasma Cutting Machine. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Portable Plasma Cutting Machine in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
