Abstracts

A Position Sensor is any device used for measuring the distance traveled by a body starting from its reference position. It measures linear or angular position in reference to a fixed point or arbitrary reference. The sensor can also be used to detect the presence or absence of an object. If the position or proximity information is combined with time measurements, then speed, velocity, and acceleration can be calculated for motion control.

This report elaborates the market size, market characteristics, and market growth of the Position Sensors industry, and breaks down according to the type, application, and consumption area of Position Sensors. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Position Sensors in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
