Abstracts

Potash fertilizer is the commonly used term for the soil fertilizer forms of potassium. The name comes from collection of wood ash in metal pots when the fertilizer benefits of this material were first recognized many centuries ago. It is a catalyst for many physiological and biochemical processes in plants. It is proactive in photosynthesis and formation of high-energy compounds, boosts vegetative growth and carries organic matter along the plant body.

This report elaborates the market size, market characteristics, and market growth of the Potash Fertilizers industry, and breaks down according to the type, application, and consumption area of Potash Fertilizers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
