Abstracts

Pour point depressants are used to allow the use of petroleum based mineral oils at lower temperatures. The lowest temperature at which a fuel or oil will pour is called a pour point. Wax crystals, which form at lower temperatures, may interfere with lubrication of mechanical equipment. High-quality pour point depressants can lower a pour point of an oil additive by as much as 40°C.

This report elaborates the market size, market characteristics, and market growth of the Pour Point Depressant industry, and breaks down according to the type, application, and consumption area of Pour Point Depressant. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
