## Abstracts

Atomic Layer Deposition (ALD) is a thin film fabrication process in which gas phase precursors are introduced into the surface individually and sequentially. Reacting with each precursor of the surface changes the surface function to a new function. It is then reacted with the next precursor in the reaction cycle.

This report elaborates the market size, market characteristics, and market growth of the Powder Atomic Layer Deposition (ALD) industry, and breaks down according to the type, application, and consumption area of Powder Atomic Layer Deposition (ALD). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Powder Atomic Layer Deposition (ALD) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
