Abstracts

A power choke is the common name given to an inductor that is used as a power supply filter element. It is an inductor used to block higher-frequency alternating current (AC) in an electrical circuit, while passing lower-frequency or direct current (DC). A choke usually consists of a coil of insulated wire and they are typically gapped iron core units, similar in appearance to a small transformer, but with only two leads exiting the housing. This report elaborates the market size, market characteristics, and market growth of the Power Choke industry, and breaks down according to the type, application, and consumption area of Power Choke. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Power Choke in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
