Abstracts

On marine vessels the Power Management System PMS is in charge of controlling the electrical system. Its task is to make sure that the electrical system is safe and efficient. If the power consumption is larger than the power production capacity, load shedding is used to avoid blackout. Other features could be to automatic start and stop consumers (e.g., diesel generators) as the load varies.
This report elaborates the market size, market characteristics, and market growth of the Power Management System industry, and breaks down according to the type, application, and consumption area of Power Management System. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Power Management System in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
